What is Hemcore BioMat?

Completely biodegradable

Made from British hemp

Truly sustainable

Why use Hemcore BioMat?

Eliminates weeds

Moisture permeable

Attractive

Protects soil

Versatile

Easy to use

Strong & durable

Hemcore BioMat is a fully biodegradable nonwoven fabric made entirely from hemp fibres. The hemp fibres are mechanically interlocked to form a tough and tear resistant fabric.

EXCEPTIONAL ECOLOGICAL PROFILE

The hemp fibres are extracted in a factory in Essex from hemp straw grown exclusively for Hemcore on British farms. The hemp is grown without the use of herbicides or pesticides and the fibres are extracted in a clean, chemical free and waste free process.

MULCHING AND TREE PLANTING

Hemcore BioMat prevents unwanted weed growth by eliminating the light essential for plant growth, and by providing a tough physical barrier. At the same time the fibrous structure of the fabric allows moisture penetration, making it an ideal material for use as a mulch to aid sapling establishment.

Hemcore BioMat can be expected to last up to two years depending on climate and soil type.

The heavy weight and robust nature of Hemcore BioMat enables it to be used **without the need for fixing pins**.

LANDSCAPING

Hemcore BioMat protects soil surfaces from erosion by wind and rain, and therefore has many uses as a geotextile in landscaping and civil engineering.

Hemp fibres have an attractive and natural light brown appearance.

VERSATILE

The multi-functional, attractive, environmental and easy-to-use properties of Hemcore BioMat make it an extremely versatile product. As well as being used for landscaping, tree and hedge planting, temporary paths and roads, and embankment stabilisation; Hemcore BioMat is also used in horticulture as a weed suppressing mulch, as plant pot covers and for lining hanging baskets.

Products

Landscaping Rolls 1m × 25m

2m × 25m

Tree Mats 1m × 1m

(slit to the centre) ½m × ½m

Other sizes available

Specification

Fabric 100% hemp fibre

Construction Needle-punched nonwoven

Thickness 5mm

Weight 800g/m²

Other weights available
